

## 1. Create two threads to read two separate text files

### 1.1 Same two files, try to read using the Task Async await.

#### [Program.cs](#)

```
using System;
using System.IO;
using System.Reflection.Metadata;
using System.Threading;

class Program
{
    static void Main()
    {
        string file1 = "C:\\Users\\dharanesh.r\\Downloads\\sample1.txt";
        string file2 = "C:\\Users\\dharanesh.r\\Downloads\\sample2.txt";

        Task task1 = ReadTask(file1);
        Task task2 = ReadTask(file2);

        Task.WaitAll(task1, task2);

        Thread thread1 = new Thread(() => ReadFile(file1));
        Thread thread2 = new Thread(() => ReadFile(file2));

        thread1.Start();
        thread2.Start();

        thread1.Join();
        thread2.Join();
    }

    static void ReadFile(string filePath)
    {
        try
        {
            string content = File.ReadAllText(filePath);
            Console.WriteLine($"Thread content of {filePath}: \\n{content}\\n");
        }
        catch (Exception ex)
        {
            Console.WriteLine($"Error reading {filePath}: {ex.Message}");
        }
    }
}
```

```

    }

    static async Task ReadTask(string fileName)
    {
        await Task.Run(() =>
        {
            try
            {
                string content = File.ReadAllText(fileName);
                Console.WriteLine($"Task content of {fileName}: \n{content}\n");
            }
            catch (Exception ex)
            {
                Console.WriteLine($"Error reading {fileName}: {ex.Message}");
            }
        });
    }
}

```

**Output :**

```

Task content of C:\Users\dharanesh.r\Downloads\sample2.txt:
This is sample 2 file

Task content of C:\Users\dharanesh.r\Downloads\sample1.txt:
This is sample 1 file

Thread content of C:\Users\dharanesh.r\Downloads\sample1.txt:
This is sample 1 file

Thread content of C:\Users\dharanesh.r\Downloads\sample2.txt:
This is sample 2 file

```
